

VIPER Stand Alone

Security Container for the transport of valuables

Easy handling,
high security,
economical to run

Staining of bank notes with security ink in case of an attack

Application

The VIPER Stand Alone has been designed to eliminate the pavement risk for CIT Companies using armoured cars e.g. for the protection of both valuables and staff. For non-armoured cars, we offer the model with surface protection. The VIPER Stand Alone combines the functions of container and security case. Its use is therefore especially designated where the valuables of the client are delivered in plastic- or fabric bags or consist of loose cash.

Equipment

- VIPER Stand Alone security container
- Touch key (Dallas key) opening system
- ELP-Stick opening system (optional)
- Surface protection for transport with non-armoured vehicles (optional)
- Holder in the vehicle for the safe transport and charging of the VIPER Stand Alone security cassette

Any abuse or attack will automatically start the alarm and the ignition of the ink system. The Bank notes in the VIPER System cassettes will be permanently marked by the security ink and are therefore of no value to the thief.

Protective functions

- Protection of valuables against pilferage, theft and robbery
- Protection of courier against attack, whether from duress, violence, kidnap
- Protection against complicity and misuse
- Protection of valuables by dyeing content with GEHRER security ink

Protective devices

- Strong container in aluminium
- Special handle with automatic safeguard against snatch attempts
- Pre-set time limits for the transport, as prevention of being taken hostage
- Loud alarm
- Security circuit for electric current with anti-sabotage protection
- Staining of valuables with security ink in case of an attack
- Safety lock (for Dallas keys)
- Site protection in the vehicle
- Surface protection (optional)
